EDUCATION

Master's:

Coventry University, UK

M.sc - Data Science, 2026

College :

Prathyusha Engineering College, India

—8.32 CGPA

B.E-computer Science and Engineering,2025

Schooling:

High School ,Andhra Pradesh, Nellore

—9.7 GPA

Narayana
Board of

Secondary Education.2019

TECHNICAL SKILLS

- **Testing & Automation:** Selenium (WebDriver 4), Pytest, API Testing (Requests), JSON Schema Validation, Page Object Model (POM), Accessibility Testing (axe-core), Cross-Browser Testing (Chrome, Firefox), Smoke/Regression/Negative Test Design__.
- **Languages:** Python, Selenium, java script.
- **Developer Tools:** VS Code, GitHub,
- **Database:** Postgres SQL, My SQL.
- **FullStack Developer:** HTML, CSS, JavaScript, Node Js, Express Js, React Js.

PROJECTS

1. QA-Automation-Framework

I've created a Selenium + pytest framework for UI test automation that uses the **Page Object Model**. It covers the entire user experience on saucedemo.com, ensuring it works well across different browsers, looks good, is accessible, responds well on mobile devices, and includes security checks that don't require user interaction._

- **Data-driven login testing** via CSV, exercising all 6 of saucedemo's seeded accounts
- **Cross-browser:** Chrome, Firefox, and Edge verified locally; Safari supported via the same -browser flag
- **Visual regression** against CI-native baselines (auto-generated and committed by the CI workflow itself, so they actually match what CI renders), with automatic pixel-diff artifacts on failure

- **Mobile viewport testing** via Chrome device emulation
- **Passive security checks** (HTTPS enforcement, password masking, response headers) — no exploit attempts against this third-party site
- **CI/CD** on GitHub Actions: a main job (Chrome, parallel, dual reporting) plus a cross-browser matrix job (Firefox on Linux, Safari on macOS)
- **Dual reporting:** pytest-html for a quick local summary, and Allure for step-by-step detail with screenshots attached inline and cross-run trend graphs
- **Live Report:** <https://naga52141.github.io/QA-Automation-Framework/>

2. OrangeHRM-Testing

Selenium, Python, Pytest, Page Object Model, GitHub Actions, Allure

- I created a 106-test Selenium + Pytest automation suite using the Page Object Model. This suite covers everything from logging in to navigating through every module of the OrangeHRM HR platform, including Admin, PIM, Leave, Time, Recruitment, Performance, and Claim.
- I automated the UI flows, such as CRUD operations, a custom JS calendar date picker, data table sorting and pagination, and bulk row selection.
- I also added accessibility scanning (axe-core) and cross-browser execution (Chrome and Firefox) into the test suite.
- I've configured GitHub Actions to run CI/CD jobs. If something goes wrong, it'll automatically try again, and we'll get Allure reports published on GitHub Pages.
- **Live Report:** <https://naga52141.github.io/OrangeHRM-Testing/15/index.html>

Honours and Awards

- I have solved over 200+ programs in skill rack portal, such as python and my SQL
- Completed over 20+ Labs in Google Cloud and certified in web dev in udemy platform

OBJECTIVE:

I'm writing to express my interest in job at your company as a strong academic background in automation testing, manual testing and hands on free in python. I'm enthusiastic about the opportunity to contribute to your team and further develop my professional skills. I chose this Company because of company values, culture, and projects. I'm confident that my passion for your company combined with my eagerness to learn and contribute and also experience and engage with your teams for further activities.
